

Dear Readers,

WELCOME TO IMPROVE!

We are happy to present you the second newsletter for education & public.

What is Industry 5.0?

Industry 5.0 provides a vision of industry that aims beyond efficiency and productivity as the sole goals and reinforces the role and the contribution of industry to society. It complements the existing "Industry 4.0" approach by specifically putting research and innovation at the service of the transition to a sustainable, human-centric and resilient European industry.

Unique development possibilities of a smart production line

The smart production line is a great opportunity to present and teach industry 4.0 solutions. In addition to the existing applications, our colleagues are working to expand the production line with newer and newer functions. Since its commissioning, developments such as real-time data display, production data analysis, additional AR functions, the mapping of a virtual counterpart of the factory during digital twin cloning or the use of machine vision for quality control have been implemented.

IMPROVE! App – Cross-border joint developments in AR

The DIH network is available to interested businesses with a common service portfolio for the implementation of their digital developments in the areas of production, electronics, engineering and software solutions, as well as artificial intelligence and machine learning. Within this application you can review the use cases of the cooperation of 5 partners on cross-border developments at SMEs. Enjoy our digital services also in AR!

Events

Final Event

The closing event of the project was held on September 15, 2022 in Wiener Neustadt, organized by FOTEC. In the opening speech, the professor of the University of Vienna, Dr. Thomas Trautner, presented the development process of ipar5.0, and the consortium partners explained the cross-border developments of SMEs, and after the event, the participants were able to see the R&D center of FOTEC.

Open Days at Teaching and learning factory

After the arrival of the smart production line, the Pannon Business Network opened its doors to the interested public and held 3 open days for a total of 110 Hungarian and Austrian participants in May and September 2022. The visitors were able to gain an interactive insight into the factory of the future, and learn about the unique developments of machine vision, AR/VR maintenance, and collaborative robot integration.

Thematic events

Presenting the digitization topics of the border working groups, the members of the network organized thematic events for the wider public. The events presented the concepts, development obstacles and opportunities of AAL, digital agriculture, advanced manufacturing, predictive maintenance and digital marketing.

i4MS Open Calls

Open calls are light, quick and user-friendly application schemes for Application Experiments to allow experimentation and testing with new ICT technologies. Each of them has a prompt start date to offer financial and knowledge-based support to manufacturing SMEs and mid-caps, allowing them to conduct small pilot projects to test Industry 4.0 technologies and assess the impact of scaling them up within their companies and offer inspiration to other companies.
